Week-4 Project Report on “BANK MANAGEMENT SYSTEM”

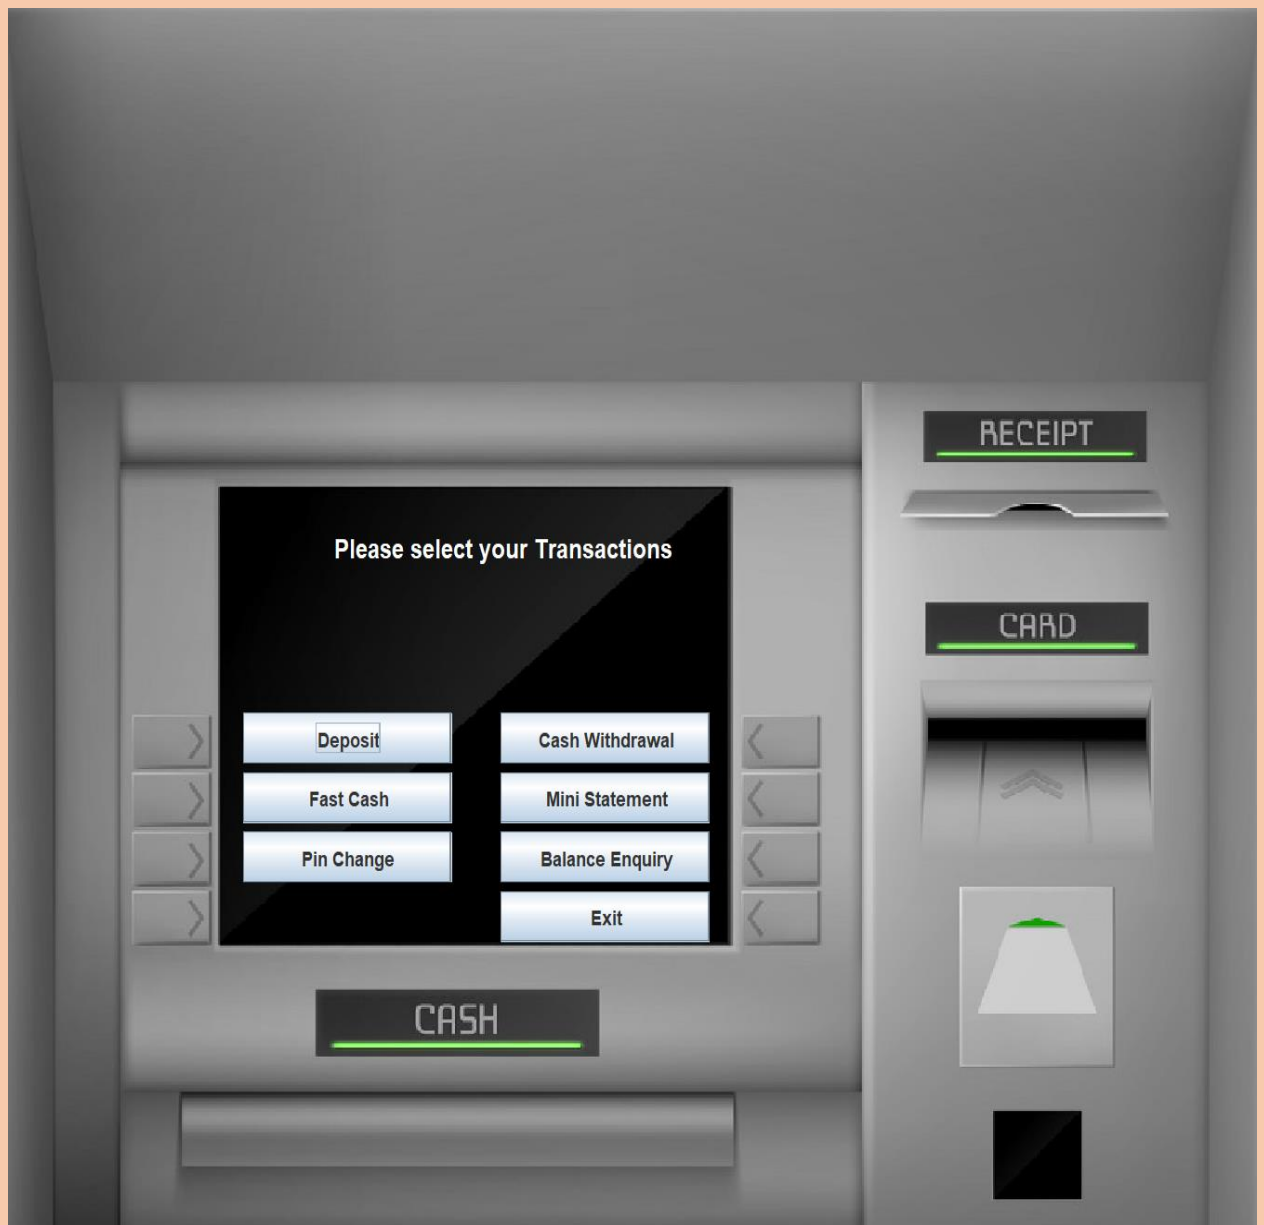

Problem Statement :

Develop a prototype of a **Banking Information System** in Core Java that provides a working preview of the key functionalities of a real banking system. The prototype should demonstrate the core features and flow of the system, showcasing its functionality and usability.

So I Continue working on the selected project . and Upto now I completed the **Transaction Page , Deposit Page , Withdraw Page and Fast Cash** . and it is working really wonderful .

But for the Transaction Page , We have to logged into it with the created account into the Bank .

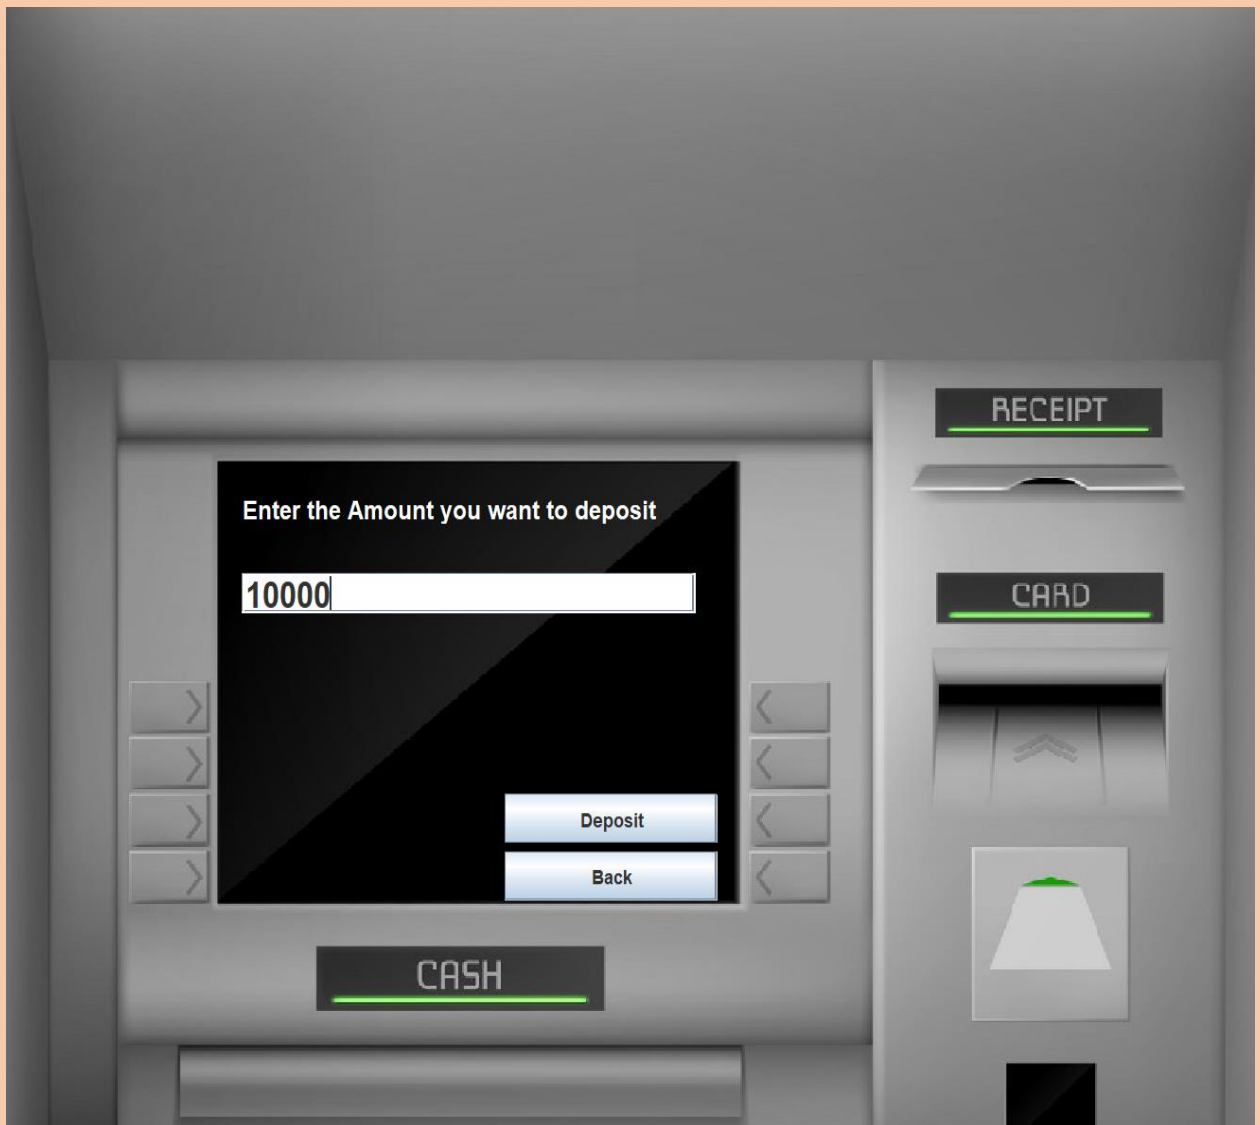

4. Following is the Screenshot of the **Transaction Page** which open at the first as transaction interface .

In the above Interface , there is

- **Deposit interface** by clicking it goes to deposit interface .
- **Cash Withdraw** interface is used to withdraw the amount
- **Fast Cash** is used to take the amount in the term of specific amount like we used in ATM also.
- **BACK** button is keep there in each and every Interface to return back to Transaction Interface.

5. When we click on the **Deposit Page** . It opens the new interface as it is in below

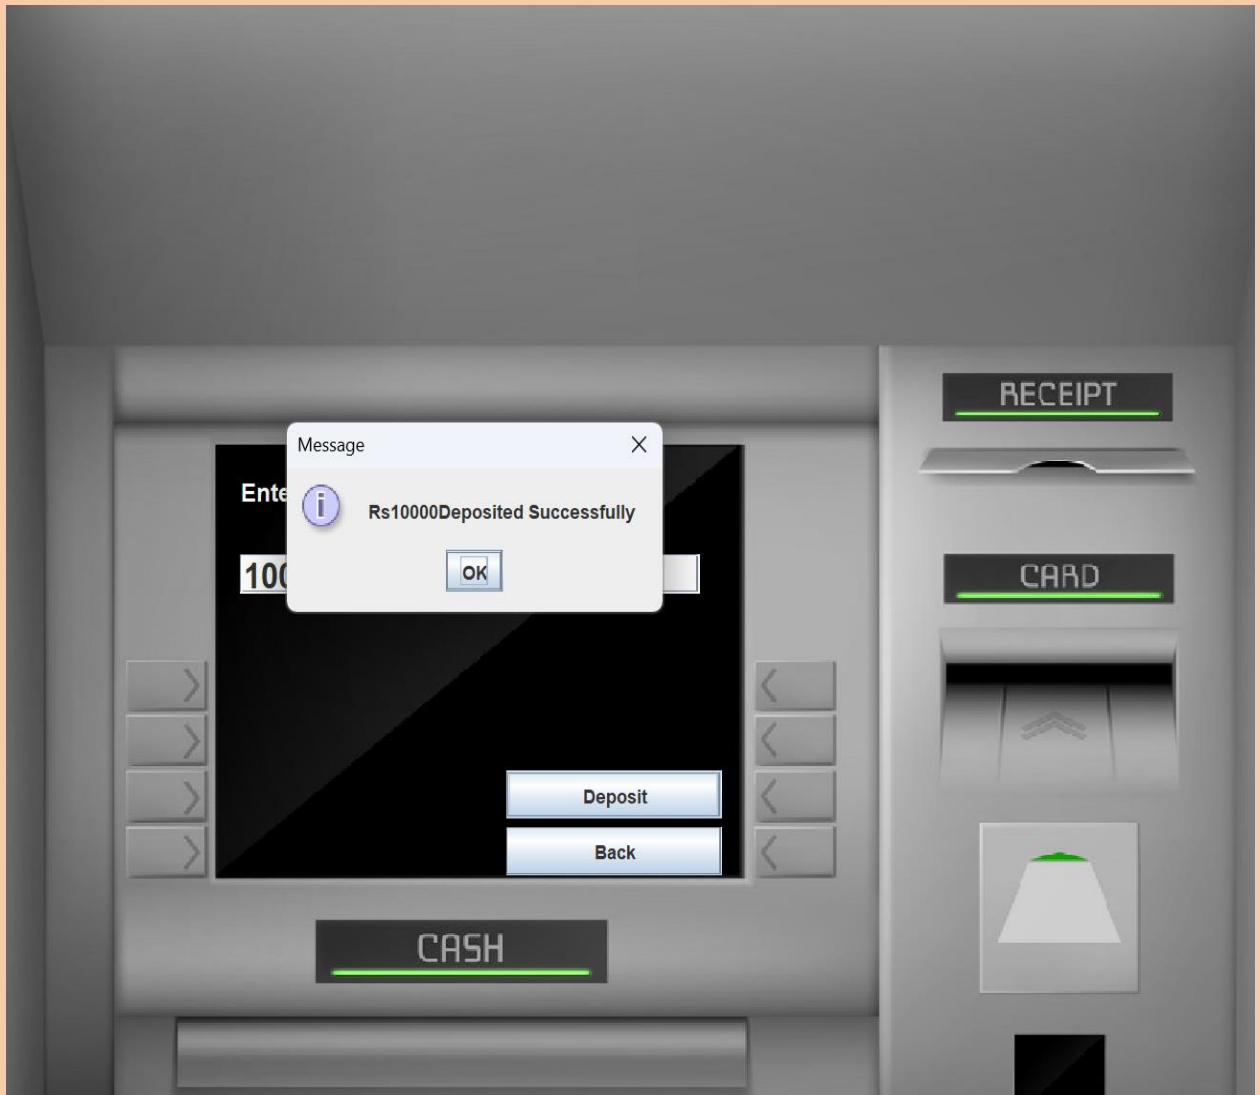

And after opened , it asked for the required amount to be debited from the respected account . So we have to enter the amount as I entered Rs 10000.

After click or confirmed Click on **Deposit** button .

It will show us one message of “Rs 10000 amount deposited Successfully”.

As it is shown below after the deposited message.

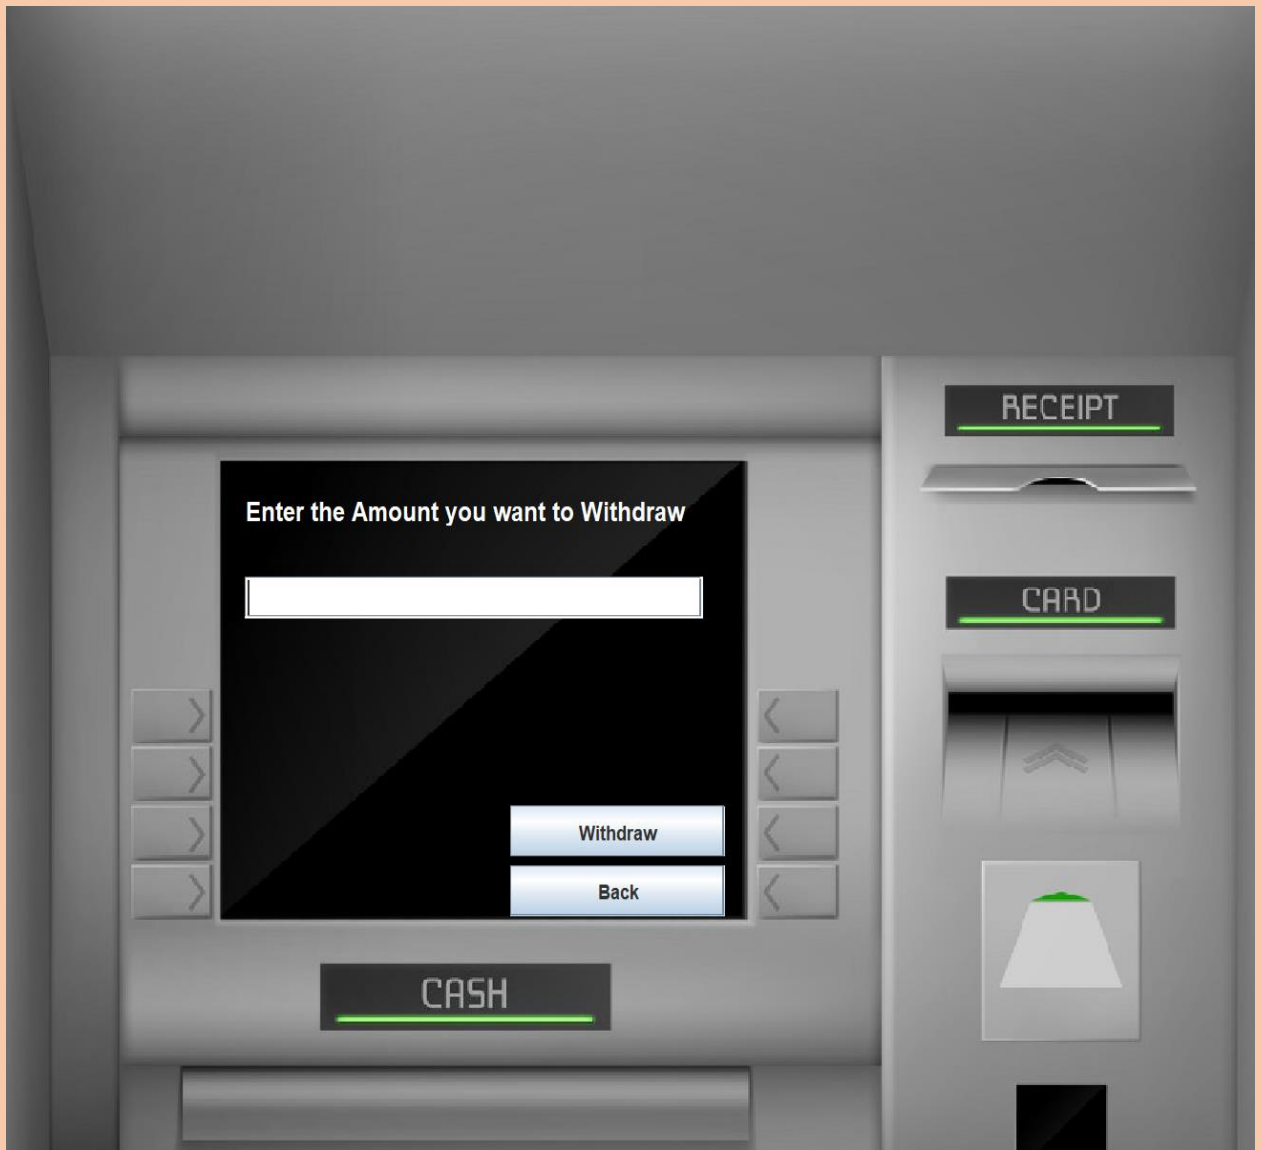

If u do not enter the any amount . it will not permit you to debited any amount .

6. Withdraw Page

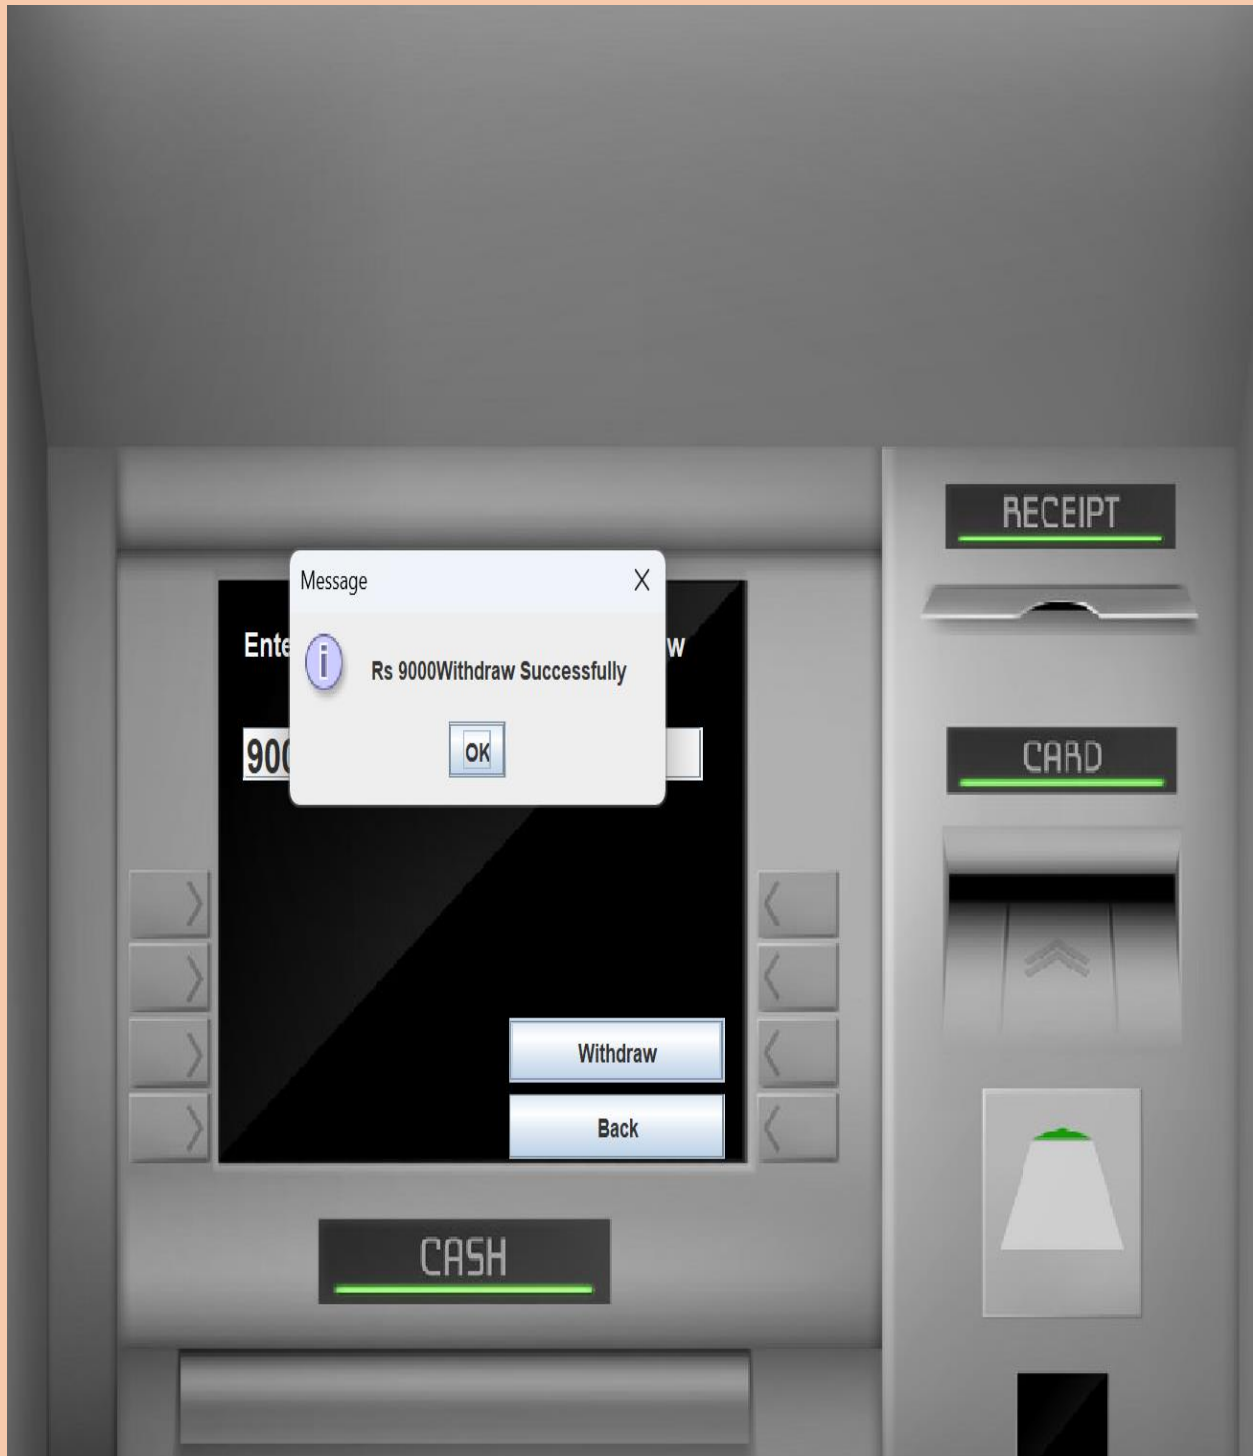

After debited , we need to Withdraw as per our amount in the account or need

So the below is the Withdraw interface shown :-

We have to enter the amount .

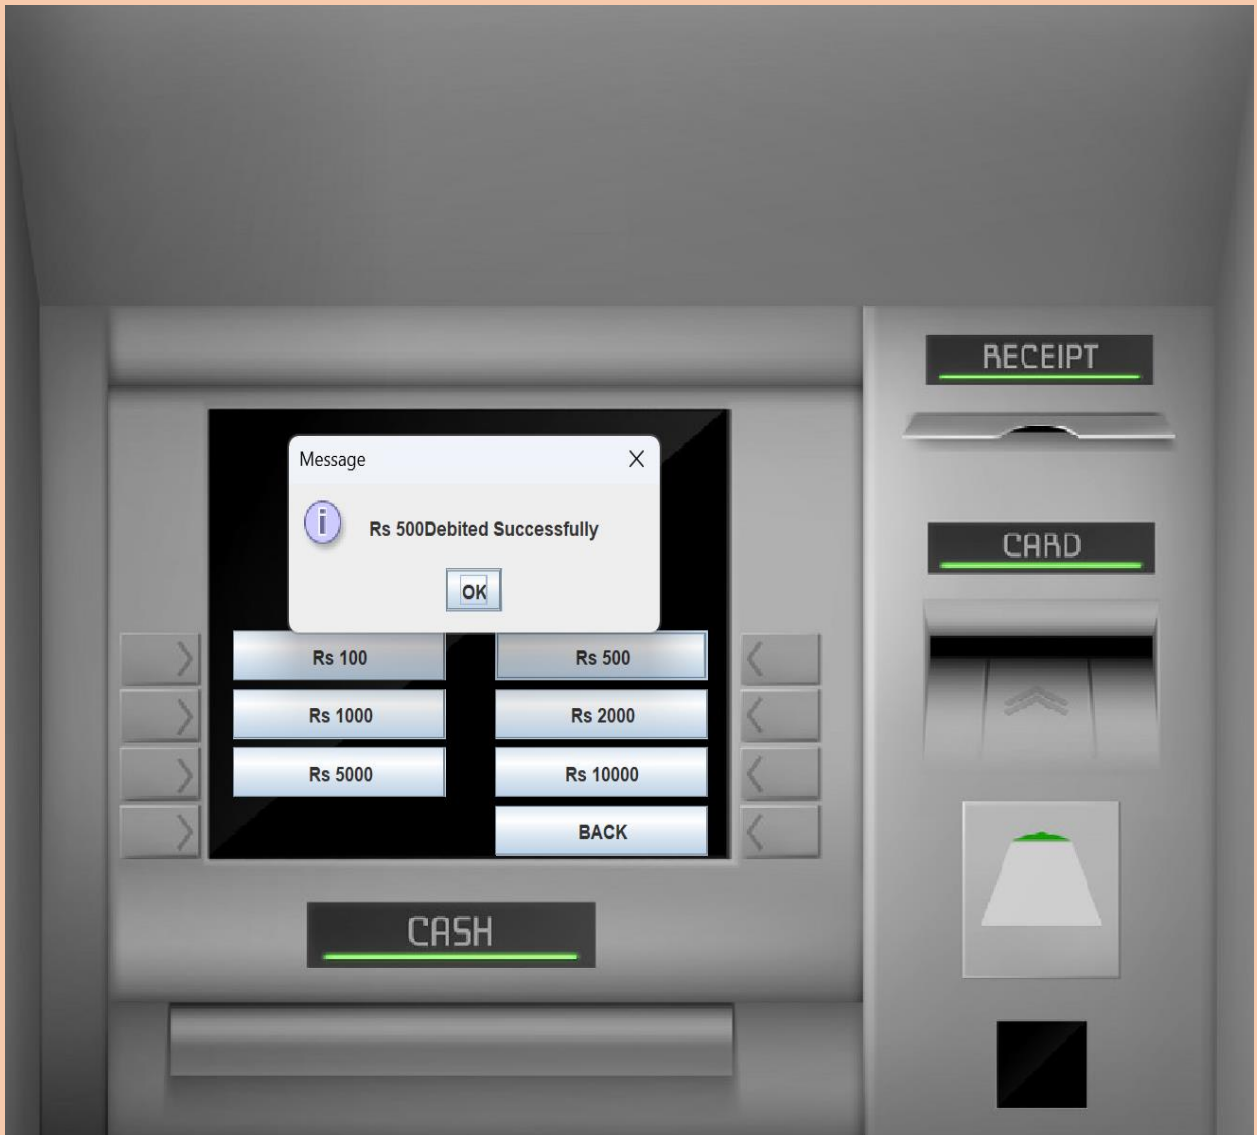

- ❖ one more thing , we can not withdraw amount more than amount is in the corresponding account .
- ❖ without entering the any amount it will not permit you to withdraw .
- ❖ When we enter the correct amount .it will shown the message of confirmation of the amount withdrawn from the corresponding account .
- ❖ And the message is shown as the below

7. **Fast Cash** is used for specific cash and is shown below

After the Withdraw it will show the message as it shown below
